Hi Paula,

In response to your question I have attached the human health risk assessment for OU 2. Section 3.2 which discusses the exposure pathways states that groundwater is not currently used as a drinking water source and is not expected to be used in the future. Hence the pathway was not quantitated. The risk assessors do not make that determination. Only the stakeholders can. I’d suggest contacting the state or EPA project managers at that time for the rationale.

Sincerely,
Susan
